Progress Report 5

Group 23: Respiratory GPS Tracker

Zachary Davis

April 13, 2018

Progress Report

Date	Hours	Description
March 31st, 2018	4	Alex continued work on the iOS application and focused on the splash screen and the tracking tab. The focus is all on finishing the tracking tab such that the position data is working for all of our reciever units and calibrating them. This leaves the final task for the app of getting the transmitter, reciever, and aplication all to communicate through our database.
April 5th, 2018	3	Started work on the abstract for our upcoming showcase.
April 8th, 2018	2	Compeleted the work on the case design for the transmitters, now just to manufacture.
April 10th, 2018	2	Started work on the groups final report and poster for the completion of the year long capstone project and continued work on the abstract.
April 12th, 2018	-	Today we completed work on the abstract and I transferred the information to a more clean and professional format.

Total Hours Since Last Update: 11

Total Hours: 106

Comments

Everything in the project is comming together. We are definitely on schedule, but still have plenty of work to do to make sure that all of these components work together and everything is in a complete and presentable clean looking package for the showcase. On top of all the project work we needed to start allocating time to work on the presentation side of the showcase with out abstract report and poster as well.
