Progress Report

Date	Hours	Description
January 30th, 2018 - February 8th, 2018	8	The last two weeks we have been waiting on hardware so we turned all of our combined focuses on the GUI for our project. We need to have a GUI for iOS as our clients requested so that all the nurses, doctors, and other hospital staff can use the in door tracking. We spent the last two weeks laying out the layers and frames required. We are includeing a map with pinpoints for each and every tracked device and more device details if clicked. We also are including a page with a list of all the devices currently being tracked. We need to contact our clients to ask for there map resource elements that they use on their app for the visitors.
Febraury 9th, 2018	< 1	Today we got an email that most of our hardware have arrived all we are waiting for now is the equipment that comes with the Poyzx development kit.

Total Hours Since Last Update: 8
Total Hours: 65

Comments

This week was all about the app development and the software on the front and back end. Waiting on the hardware this week ended up being a good thing so we could catch up on the work that needed and needs to be done on the tracking and information in the application.
